JOB MANAGEMENT

# Legacy Jobs

How to encode pending shipments from the old system on the usual Air Shipment, Sea Shipment, Transport Job, Declaration, and Warehouse Job forms.

Use this when a file already exists in the prior system, still needs to be worked in CargoNext, and must keep its old job number. You do not need a Sales Quote, booking, or order.

| Audience | What they do |
|---|---|
| System Manager | Turns Allow Legacy Jobs on or off in Job Management Settings. |
| Operations / encoding staff | Opens the usual file type, checks Legacy Job, types the old number, and encodes details and charges. |
| Finance / recognition | Treats sides tagged Posted in Prior System as already billed or costed. CargoNext does not create an SI, PI, or journal for that side. |

## In this guide

| Section | You will learn |
|---|---|
| 1. What a Legacy Job is | When to use the flag and what stays the same as a normal file. |
| 2. Turn the feature on | How a System Manager enables Allow Legacy Jobs. |
| 3. Create the file | Legacy Job, Legacy Job No, and the usual details. |
| 4. Charges | Add Row and Posted in Prior System for revenue and cost. |
| 5. Linked services | How satellites stay on the existing Manage Linked Services path. |
| 6. Save and work the file | Naming, Job Number, milestones, tasks, and submit. |
| 7. Turn the feature off | How to hide the checkbox when encoding is done. |
| 8–9. Errors and checklist | Rejected saves and a close-out checklist. |

23 October 2026 · CargoNext Logistics

# 1. What a Legacy Job is

A Legacy Job is a normal operational file that you type in by hand so CargoNext can take over a pending shipment from the old system. After save it is the same kind of document as any other Air Shipment, Sea Shipment, Transport Job, Declaration, or Warehouse Job: milestones, job tasks, documents, and a Job Number are created on the usual save path.

The only differences are how the file is started and how already-posted charges are tagged:

- You start it on the real form. There is no separate Beginning Jobs page.
- You check Legacy Job and type the old number in Legacy Job No. That number becomes the document name.
- You do not need a Sales Quote, booking, or order to save or, for air and sea, to submit.
- Each charge side that was already posted in the old system is tagged Posted in Prior System. That side is left out of new sales invoices, purchase invoices, WIP, and readiness.

> **Keep the setting off when you are not encoding**
> If Allow Legacy Jobs is unchecked, the Legacy Job checkbox is hidden on every shipment and job form — including files that already have the flag. Turn the setting on only while staff need to encode old files.

# 2. Turn the feature on

1 **Open Job Settings**

In the Job Management sidebar, open Job Settings. That opens the single record Job Management Settings.

2 **Check Allow Legacy Jobs**

In the Legacy Jobs section, check Allow Legacy Jobs and save. The intro on that form states that the checkbox will then appear on the five file types.

3 **Open a new file**

Open a new Air Shipment, Sea Shipment, Transport Job, Declaration, or Warehouse Job. If a form was already open, refresh it so the desk picks up the setting.

> **Who can change the setting**
> Job Management Settings is a System Manager record. Operations staff encode files after a manager turns the setting on. They do not need to open settings themselves.

# 3. Create the file

## 3.1 Mark it as a Legacy Job

On the Details tab, check Legacy Job. Two things change immediately:

- Legacy Job No appears and is required.
- Naming Series is hidden. CargoNext will not assign ASP-, SSP, TRJ, CD, or WJ- numbers.

## 3.2 Enter Legacy Job No

Type the old-system file number exactly as it should appear in CargoNext. On save, that value becomes the document name and the Job Number.

| Rule | Detail |
|---|---|
| Allowed characters | Letters, numbers, spaces, dots, and dashes. Example: OLD-AIR-1042 or AJ 8821. |
| Not allowed | A slash (/) or other punctuation. OLD/1042 is rejected. |
| Length | 1 to 139 characters. The first character must be a letter, number, or underscore. |
| Unique | The number must not already exist on that file type or as a Job Number. |
| After save | Legacy Job No is read-only. You cannot change it, and you cannot clear Legacy Job. |

### 3.3 Fill the usual details

Complete the same required fields you would on a normal file: customer, dates, direction, shipper and consignee, ports or locations, company, and the accounting dimensions the form still requires. Leave Sales Quote, Air Booking, Sea Booking, Transport Order, and Declaration Order empty.

> **Weight and volume on air and sea**
> If there are no packages yet, check the volume/weight override and type the totals from the old file. Otherwise the packing summary can replace the encoded totals with zero and block the draft.

## 4. Charges

On a normal shipment the Charges grid does not allow Add Row. On a Legacy Job it does. Use Add Row (or bulk edit) and encode each charge the old file still carries.

### 4.1 Tag sides already posted in the old system

Each charge has two status fields. Use them independently. A charge can be posted for revenue, for cost, for both, or for neither.

| Field | When to use Posted in Prior System | What CargoNext does |
|---|---|---|
| Revenue Invoice Status | The old system already billed the customer for this line. | The side is left out of sales invoice eligibility, WIP, and SI readiness. No Sales Invoice is created. |
| Cost Invoice Status | The old system already recorded the supplier cost. | The side is left out of purchase invoice eligibility, accrual, and PI readiness. No Purchase Invoice is created. |

Leave a side as Not Requested when CargoNext still has to invoice or accrue it. Those open sides follow the normal posting path after save.

> **Posted in Prior System is tag-only**
> CargoNext does not create a Sales Invoice, Purchase Invoice, or Journal Entry for that side. The amount stays on the charge row so operations can see what was already done. Do not use this status on a file that is not a Legacy Job.

## 5. Linked services

If the old file also needs a satellite service (for example a transport leg under an air file), use the existing Manage Linked Services path on the form. Create each linked service the same way you would on a normal

shipment. If that satellite is itself an old-system file, open its own doctype, check Legacy Job, and give it its own Legacy Job No.

Supported file types for Legacy Job:

| File type | When to use it |
|---|---|
| Air Shipment | Pending air export, import, or domestic file from the old system. |
| Sea Shipment | Pending sea file from the old system. |
| Transport Job | Pending haulage or inland job from the old system. |
| Declaration | Pending customs declaration from the old system. |
| Warehouse Job | Pending warehouse or cross-dock job from the old system. |

## 6. Save and work the file

1

### Save as Draft

Click Save. CargoNext names the document with Legacy Job No, creates the Job Number with the same name, and runs the usual milestone, job task, and document-list hooks.

2

### Check the name

The form title and Job Number should match the number you typed. If save is rejected, see section 8.

3

### Continue as a normal file

Add packages, routing, parties, documents, and tasks as you would on any other draft. Submit when the file is ready. Air and Sea do not require a booking on a Legacy Job.

**After save**

Legacy Job stays checked and becomes read-only. Legacy Job No stays read-only. You can still edit details, charges, and services that the form otherwise allows.

## 7. Turn the feature off

When encoding is finished, a System Manager unchecks Allow Legacy Jobs and saves. The Legacy Job checkbox and Legacy Job No field disappear on new and existing forms. Files that were already saved remain Legacy Jobs. Their charges and Job Numbers do not change.

Open a new form after saving settings so the desk reads the live flag. A form that was already open may still show the old state until you refresh it.

## 8. If save is rejected

| Message you see | What to do |
|---|---|
| Turn on Allow Legacy Jobs… | A manager must check Allow Legacy Jobs in Job Management Settings, then refresh the form. |
| Legacy Job No must be letters, numbers… | Remove slashes and other punctuation. Use only letters, numbers, spaces, dots, or dashes. |

| Message you see | What to do |
|---|---|
| Air Shipment / Sea Shipment / … already exists | That number is already a file of this type. Confirm you are not duplicating an encoded job. |
| Job Number … already exists | That number is already a Job Number, possibly from another file type. Choose the unique old-system number for this file. |
| Legacy Job cannot be cleared | You cannot uncheck Legacy Job after save. That is expected. |
| Legacy Job No cannot be changed after save | The number is the document name. If the old system number was typed wrong, create a new file with the correct number and cancel or ignore the wrong one per your procedure. |
| …posted in the prior system is only valid on a Legacy Job | Posted in Prior System can only be used when Legacy Job is checked. |
| Missing Branch, Cost Center, or Profit Center | Those fields still follow company settings. Ask a manager to set the company defaults, or fill them if the form allows. |

## 9. Quick checklist

| # | Check |
|---|---|
| 1 | Allow Legacy Jobs is on in Job Settings. |
| 2 | You opened the correct file type (Air, Sea, Transport, Declaration, or Warehouse). |
| 3 | Legacy Job is checked. |
| 4 | Legacy Job No matches the old-system number and has no slash. |
| 5 | Required operational fields are filled. Quote, booking, and order are left empty. |
| 6 | Each charge that was already billed is tagged Posted in Prior System on the revenue side. |
| 7 | Each charge that was already costed is tagged Posted in Prior System on the cost side. |
| 8 | Open sides stay Not Requested so CargoNext can still invoice or accrue them. |
| 9 | Linked services are created where the old file had them. |
| 10 | Save succeeds. The document name and Job Number equal Legacy Job No. |
| 11 | When the batch of old files is done, a manager turns Allow Legacy Jobs off. |

*This guide describes the desk as of 23 October 2026. It does not replace Job Management policy on when a file may be encoded as a Legacy Job.*
